

1. 7 GHz Coaxial Isolator

Renaissance Electronics has developed a 6.7 to 7.1 GHz, medium power coaxial isolator that can handle up to 50 W of reverse power. With insertion loss less than 0.3 dB, the unit offers more than 20 dB isolation and VSWR better than 1.25:1. The connectors (SMA-Female at the input and N-Female at the output) are field replaceable and have removable spacers that facilitate mechanical maneuverability. The robust unit can operate at altitudes up to 10,000 feet and at temperatures ranging from -40 to +85 °C.

2. Renaissance/HXI Employees Help Local Community Toy Drive

The Ayer Police Department held its annual toy drive to help Loaves & Fishes, a charity in Devens, distribute toys to the needy. As we have done for five years now, Renaissance participated in the toy drive along with other organizations like the Ayer Middle School. Board games, remote controlled cars, Barbie dolls and bikes formed part of over 1900 toys that were collected, of which more than 70 toys were donated by employees of Renaissance and HXI.

Renaissance, with help from our vendors, also donated over \$600 in cash. We are grateful to our vendors who contributed to this cause.
