

Ultra High Peak Power Isolator, C1-S15337

Renaissance has designed a new 20 kW peak power isolator designed to sustain 64 W CW operating at 2110 – 2750 MHz. The input and output connectors are 7/8" EIA and has a 5" long section for termination. With insertion loss of less than 0.6 dB and with return loss and isolation over 15 dB, the isolator is ideal to protect a HPA from unwanted reflections. This isolator is ideal for high peak pulsed radar applications.
