

DESCRIPTION

The HLNA Series of Low Noise Amplifiers covers the frequency ranges from 20 to 100+ GHz. A wide variety of gain and bandwidth combinations are available to provide the designer with a solution for most applications. Custom designs are available and in many cases NRE is not required. MMIC technology is employed for high reliability and repeatability.

The amplifiers can be used to lower system noise figure in communication and radar systems and also as gain blocks in LO chains and test equipment. Low noise amplifier stages can be combined with power amplifier stages for higher P1dB levels. LNAs can also be packaged with other components for custom configurations.

Each LNA contains a voltage regulator and bias sequencing circuitry allowing the use of a single bias to power the amplifier.

Applications

Radar Front Ends
MMW Radio Links
Test Equipment

Features

Low Noise Figure
Multiple Gain / P1dB options
High Bandwidth models
Single Bias / Internal Regulation
Internal Bias Sequencing

Requesting Quotes

When requesting a quote for HLNA Low Noise Amplifiers, please specify required frequency range and any other required specifications. HLNA amplifiers are built to order and will be optimized for the bandwidth specified by the customer. The part number guide below can also be used as a reference for requesting quotes.

Interface Options

**SMA female connectors available to 20 GHz.
2.9 mm connectors available through 40 GHz.
2.4 mm connectors available through 50 GHz.
1.85 mm connectors available through 67 GHz.**
